EDUCATION

Tufts University

Bachelor of Science in Computer Science

Medford, MA

Sep. 2021 – May 2025

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL, JavaScript, TypeScript, HTML/CSS, Bash

Frameworks: React, Node.js, Next.js, Chrome Extensions (Manifest V3), Unity, GSAP

Cloud & Tools: Firebase, Firestore, Supabase, Google Cloud Platform, Git, Webpack, GitHub Actions

AI/ML: LangChain, RAG Pipelines, Claude API, Prompt Engineering

EXPERIENCE

Matrices.ai, Software Developer/Project Lead

Aug 2025 – Jan 2026

Remote

Hillside, NJ

- Led benchmarking initiative for AI agent evaluation across 6 simulation environments (Gmail, Calendar, Slack, Linear, Trello, LinkedIn), defining scope and success criteria
- Diagnosed and resolved critical 20+ on-call production bugs in a TypeScript/Next.js Google Calendar API clone, fixing recurring event propagation, cross-calendar attendee synchronization, and serverless state leakage
- Built an automated testing pipeline with parallel process orchestration that executed 137+ API test cases, discovering 53+ bugs across Google Calendar, Gmail, and HubSpot API implementations
- Designed 9 AI agent training tasks across distinct business domains, authoring task prompts, state generators, and JavaScript grader functions to produce validated training data for the platform

Engineering Education Research, Software Developer

September 2023 – August 2025

Tufts University

Medford, MA

- Built a 3D water purification simulator in Unity (C#) for 200+ environmental engineering students
- Redesigned UI/UX from 3 years of student feedback, improving usability across assessment workflows
- Designed assessment modules with integrated learning analytics to track comprehension and completion metrics

GoDaddy Intern, Software Developer

May 2024 – Aug 2024

Remote

Hillside, NJ

- Built end-to-end data pipelines and OAuth authentication flows for 5 social platform integrations (TikTok, Yelp, Instagram, Google, WhatsApp) on the SPLAT team, enabling cross-team access to social media content
- Developed and demoed full-stack API connectors and UI components for cross-platform media retrieval, adopted by internal teams to accelerate their own product workflows

PROJECTS

Daily Bread – Chrome Extension | *TypeScript, React, Firebase* | daily-bread-landing.web.app Feb 2026 – Present

- Reverse-engineered YouVersion's undocumented mobile API using network analysis to unlock additional translations, devotional content, and prayer features, implementing custom header spoofing and session-level caching to manage rate limits
- Shipped AI-generated reflection questions and scheduled verse reminders informed by engagement data (completion rates, feature adoption), growing the user base to 30+ active installs
- Integrated the Claude API with engineered prompts to synthesize study notes from 3 commentary sources, with an automated daily content generation pipeline via GitHub Actions

Senior Capstone – AI Lesson-Planning Chatbot | *Python, LangChain, RAG, GCP*

May 2025

- Developed an AI-powered WhatsApp chatbot for the nonprofit Potencia, giving tutors on-demand answers from documentation and streamlining lesson plan creation
- Engineered the core Retrieval-Augmented Generation (RAG) pipeline using LangChain to ground the AI in a specific knowledge base, ensuring tutors received contextually accurate, source-grounded answers

ACE++ Website <https://ed-key.github.io/ACE/> | *React, JavaScript, Figma*

February 2023

- Designed and built a React website for Tufts' ACE++ summer program, reaching 500+ students on launch
- Led iterative design reviews with administrative staff using Figma prototypes to align visual identity within a 2-month launch window
